

Touchless Valve and Ice Kit

Specification Sheet

The Touchless Valve and Ice Kit provides a complete solution for converting existing Cornelius dispensers to touchless, sensor-activated operation. The kit includes electronic controls, infrared sensor, valve assembly, and all associated components needed for a full retrofit — ideal for enhanced hygiene in high-traffic foodservice locations.

Features

- Touchless sensor-activated dispensing for hands-free operation
- Complete kit with controls, sensor, and all components included
- Retrofit design for easy installation on existing dispensers
- Enhanced hygiene for high-traffic foodservice environments
- Infrared proximity sensor for reliable activation
- Compatible with ice dispensing functionality
- Reduces cross-contamination risk

Specifications

Activation	Infrared Proximity Sensor
Dispensing	Beverage and Ice
Power	Low-voltage electronics
